The Giant Squid

Okay here it is, my first entry in the MMIP. Take it easy on me.

Construction of the Squid is pretty simple. Just score on the white line, then glue and press until dry. After that, cut around the outline and mount in a base.

Sorry there isn't a very big trim line. I'm still trying to figure that out. I need to see if Gimp has an addon that will do tracing and outlining. Oh well Rome wasn't built in a day. The process has been a lot of fun and I hope I get better as I go along.
