

Ganymede Jet Speeder

MMIP 37

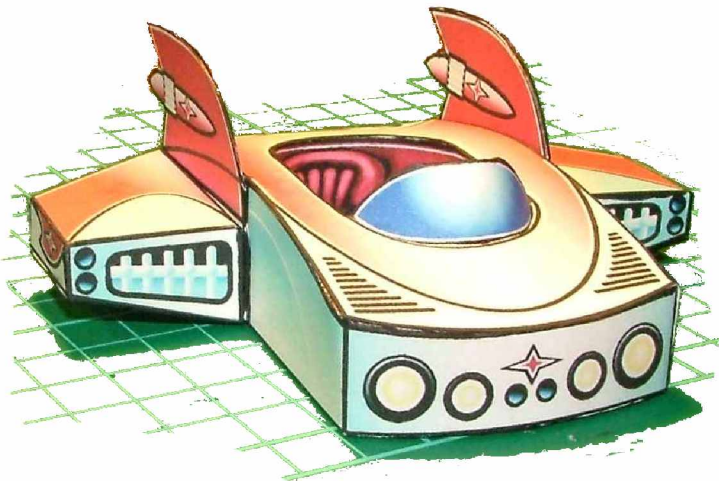

2007 Shawn Harvey

Instructions

1. Cut out all parts. Cut out cockpit hole on body-top.
2. Fold and glue windscreen front to back. Fold windscreen tabs up and glue under front edge of cockpit hole.
3. Fold up front and rear sections of cockpit interior. Fold and glue tabs under cockpit interior base. Glue rear cockpit sidewall end tabs to outside of front sidewall section.
4. Fold out tabs at the top of cockpit interior and glue to underside of body-top. The body-top arches over the cockpit interior.
5. Fold and glue body base section together printed side is out. Make sure to curve the front and rear ends to match the base and glue into place. Glue body top onto body base section.
6. Build each wing sections (they're each a skewed box shape).
7. Fold each fin down the center line and glue front to back.
8. Glue fins to sides of the body.
9. Glue wing sections in place. Note that they sweep forward and up.

Option: Can be built without the fin sections.
