

# assembly instructions

1) the lower part : start with the legs, fold them so they'll make a (W) shape like "fig 1", then fold the hip around the both legs then glue the last section to one of the legs. "fig 2".

2) Torso : start with the shoulders, by folding the 3 lines mountain fold, vally fold, the mountain fold, this will give it some thickness. don't forget to remove the white circle between the shoulders.

3) Head : start by folding the highest part so it'll fill the space behind the arced section, then fold both tabs to close on that part. but some glue on the tabs - but not the highest part - and glue it to the back part of the head, then insert the neck in the space between the shoulder and glue it to the "BACK" side.

4) Arms : fold the back sides of the arms to match the front side but "DO NOT" glue them together !, leave them to give 3D to the arms, roll the hand part to make a full circle then glue the tab to the opposite side of the arm, so a tooth-pick can slide inside the hole now glue the arms' ax to the inner face of the back side from the torso, then glue the small tabs to the front side.

5) glue the Torso tabs to the inner side of the belt, then insert "something" in the gap between both faces of the torso and push them apart to give more 3D to the whole shape.

6) making a bending elbow or knee : fold the line " elbow or knee" so you have a cross fold, now hold the arm and from both ends and bend it like "fig 6", then fold the the small triangles to either side.

Fig 1 : legs.

fig 2 : plan of lower part.

Fig 3 : how to fold the shoulders.

Fig 4 : how to fold the Head.

Fig 5 : how to assemble the the arm and hand.

Fig 6 : how to create an elbow or shoulder.
